

Conveyor system designed to go between any stitch/fold tower unit

252 Universal Interface/Conveyor

ROSBACK

The 252 Universal Interface is a conveyor unit designed to go between *any* tower stitch/fold unit and Rosback 250 or 318 Trimmers. The 252 Universal Interface accepts stitched and folded booklets inline from the tower collator finishing unit and moves the booklets in proper synchronized time to a Rosback 3-knife trimmer.

With 3-knife trimming, avoid the added time, cost and problems associated with guillotining books off-line. The result... perfectly trimmed books ready for your on-demand customers.

STATE-OF-THE-ART PERFORMANCE FEATURES:

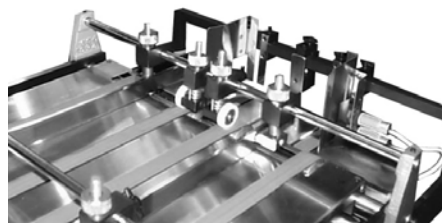

- Accepts stitched and folded booklets inline from tower collators.
- Adds productivity to your existing booklet making with Rosback 3-knife trim quality finishing.
- Programmable controller that can be modified or expanded to meet your requirements.
- Solenoid controlled for perfect timing sequence to trimmer.
- Back-lit display with rate meter and book counter.
- Solid metal construction and mobile.
- Ball bearings on all rotating shafts.

Adjustable in-feed table accepts booklets from any stitch/fold unit.

Conveyor unit connects to Rosback 3-Knife Trimmers.

Booklets are collected into a hopper and inserted in proper synchronized time into Rosback 3-Knife Trimmers.

In-Line solutions shown with Rosback 3-Knife Trimmer.
